

## File of Additional Metadata - File Format (Updated on Aug 24)

This document describes the file format for adding additional details for published articles. This file will be processed by the Impact Vizor system. Each row in the file represents a published article, uniquely identified by the DOI.

The additional details in the file will take precedence and replace the TOC section and/or Collection stored in the HighWire article repository (i.e. ATOM store) where the article exists in the HighWire repository (i.e., for HighWire-hosted publishers).

### File Format

The file must be a tab-delimited text file.

Each line of the file represents a published article.

The file format should be UTF-8 encoded.

The first line of the file is the header and must have the names of the attributes. All of the attribute names listed below must be present in the header.

Each line must include values for each attribute in the order specified below.

Any attribute that is required must have a non-empty value.

Any optional attribute may have an empty value.

Each line must include 7 tabs.

Position	Attribute	Value	Value Format	Required	Example
1	DOI	DOI for the published article.	Text	Y	10.1182/blood-2012-09-457317
2	TOC_SECTION	Table of Contents section assigned to this article.  This value will replace the TOC section stored in HW article repository.	Text	N	Review Article
3	COLLECTION	Primary collection for this article.  This value will replace the TOC section stored in HW article repository.	Text	N	Oncology
4	EDITOR	Editor that accepted this article.  Last Name, First Name	Text Last Name, First Name	N	Lang, Peter

5	CUSTOM	A custom field that can be applied to the published article for grouping.	Text	N	Custom Value
6	CUSTOM_2	A 2nd custom field that can be applied to the published article for grouping.	Text	N	Custom Value 2
7	CUSTOM_3	A 3rd custom field that can be applied to the published article for grouping.	Text	N	Custom Value 3
8	CITEABLE_ARTICLE	An article in a journal that is considered to be "citable" (aka a source article).	Text  Valid Values are 'Yes' or 'No'.  If no value is specified, we assume a value of 'Yes'	N	Yes

## Delivery

A file should be delivered with the set of published articles and respective additional details to import into Impact Vizor. This should be a single file.

The filename should follow this format:

vizor\_pat\_details\_[PUBLISHER]\_MM\_DD\_YY.tab

where the:

PUBLISHER = name of abbreviation of publisher

MM\_DD\_YYYY = month/day/year for when the file was created or updated.

The additional details can be updated by providing a new file with new values. These new values will replace any previous values in Impact Vizor for a given article DOI.

### Example

vizor\_pat\_details\_ash\_09\_01\_2015.tab

The file should not be encrypted.

The file contents should be UTF-8 encoded.

The file may be zipped.

The file should be delivered via email to [nmehta@highwire.org](mailto:nmehta@highwire.org) and [sack@highwire.org](mailto:sack@highwire.org).

If your email provider blocks sending of file (due to file size limitations), please let us know and we'll setup a shared google drive folder to upload the file.
